(54) Title: METHOD AND SYSTEM FOR PROCESSING PASSWORD INPUTTED BY THE MATCHING OF CELLS

(57) Abstract: A password system is disclosed. A method for authenticating a user in the disclosed password system is described. The password system of the present invention is an advanced password system implemented by a password input method capable of preventing a password from being revealed to others who directly watches a password input procedure. A user interface proper to the above method is provided. The user interface provides at least more than two boards. The cells aligned on two boards are matched through a matching unit provided to a user. At this time, the cells matched for the password input are concurrently matched with the cells adapted to disguise the same, so that a third party person cannot recognize whether which cell is used for a password input.
